BHAVAN'S COLLEGE AUTONOMOUS, ANDHERI-WEST
PRACTICAL JOURNAL

Class: TYIT **Sem: VI** **Roll No.: TYIT07** **Date: 15-12-2025**

Course Name: Geographical Information System **Page no:**

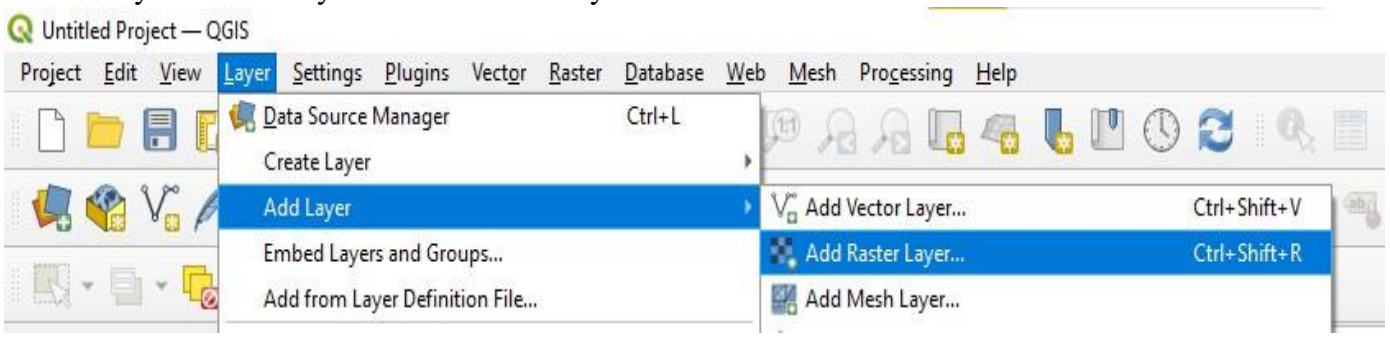
Practical Number:- 02

Aim: Exploring and Managing Raster data:

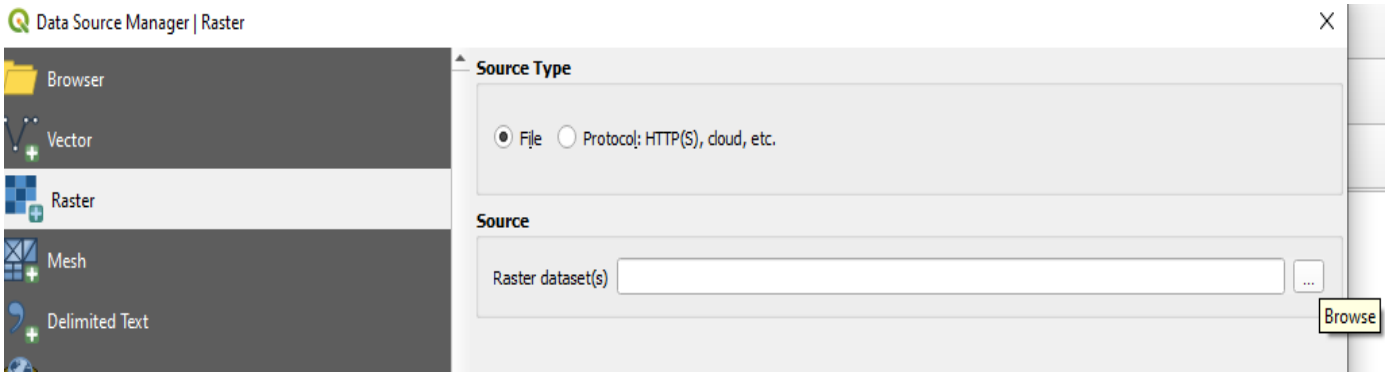
Download 'Practical_02-20211217T154346Z-001' and Extract All

a) Adding raster layers.

- Layer → Add Layer → Add Raster Layer.



- Check on that three dot.



- Find the location of 'Practical_02-20211217T154346Z-001' double click on it → Practical_20 → A → Data → gl_gpwv3_pdens_00_ascii_one → glds00ag60.asc → Add.

- Find the location of 'Practical_02-20211217T154346Z-001' double click on it → Practical_20 → A → Data → gl_gpwv3_pdens_90_ascii_one→ glds90ag60.asc → Add

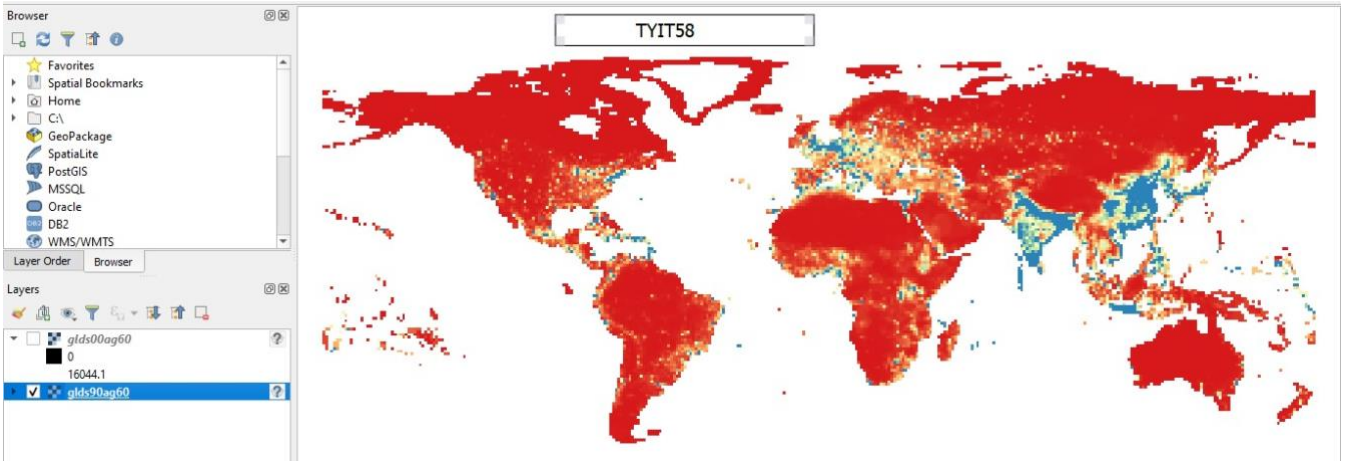
Practical Number:- 02

b) Raster Styling and Analysis.

- Right click on glds90ag60.asc → Properties → Render type: Singleband pseudocolor → max:250 → color ramp: that you want → apply → ok.
- Now Calculate Raster for that → Raster → raster Calculate → click on three dot → select the output file location and name → ok.



- Put expression 'glds00ag60@1' – 'glds90ag60@1'.

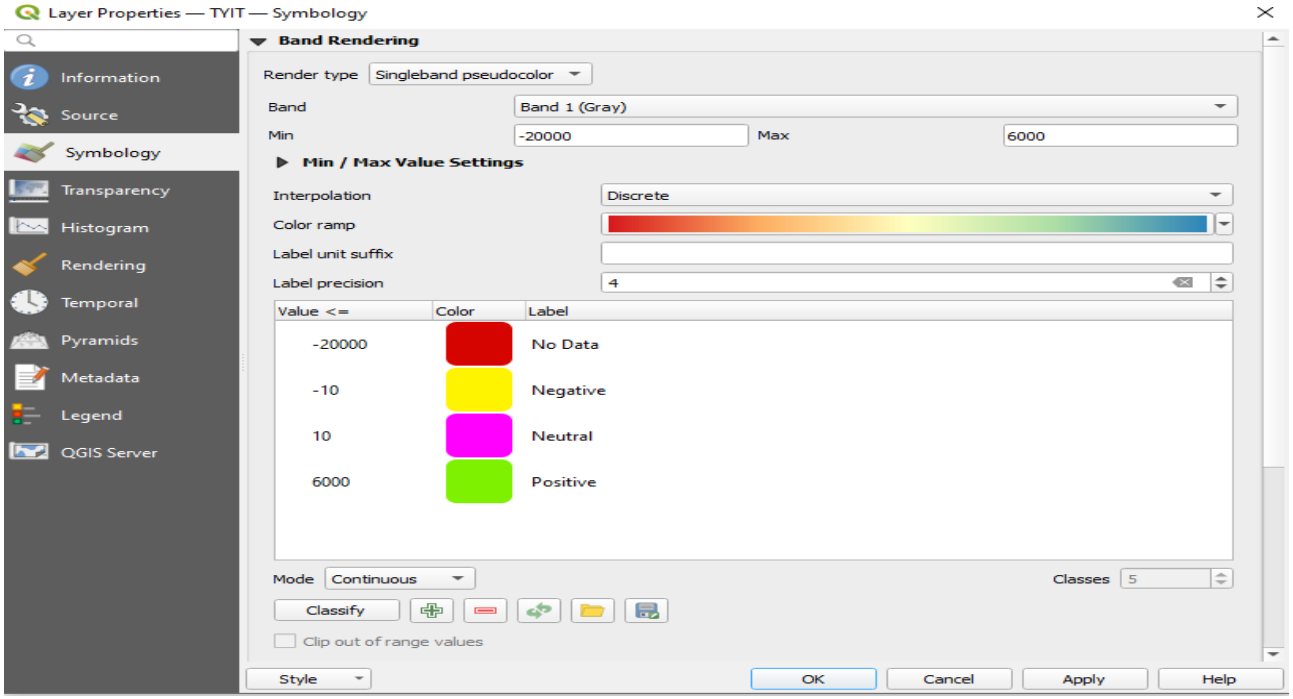
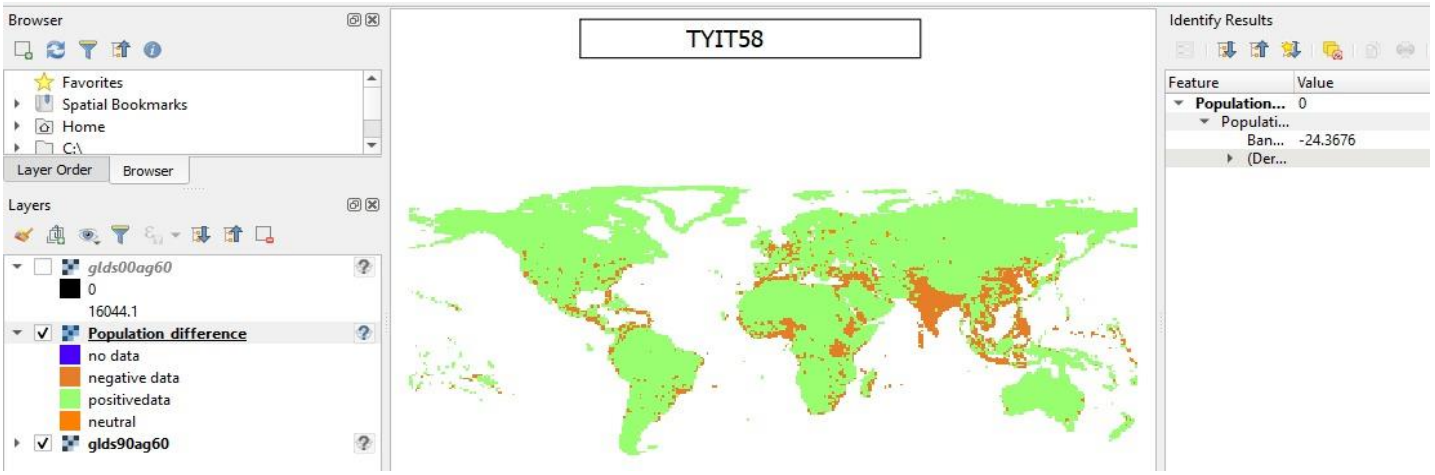
- 'TYIT' file will appear → right click on that → properties → Symbology.
- Render type: singleband pseudocolor → min: -20000 → max: 6000 → Interpolation: Discrete → color ramp as you want
- Remove all classification 'ctrl+A' & click on – (subtract) and click on + (add) as show in figure below (you can change color) → ok



- The output will be like this, layers will appear



- Explore an area of your choice and check the raster band value using to verify the classification rule
