Course Name: Software quality assurance **Page no:**

Practical Number :- 03

Q. Create a test plan document for any application (e.g. Library management system).

TEST PLAN

Library Management System

Student Name: Abhinav Yadav , Kartik Yadav , Kavita Yadav , pammi Yadav , prince Yadav

Roll Number: TYIT56, TYIT57, TYIT58, TYIT59, TYIT60

Module Chosen : Notification

Date: 8/01/2026

Introduction

Purpose of Testing:

The purpose of testing the Notification Module is to ensure that the system sends accurate and timely notifications to users for important events such as book issue confirmation, due date reminders, fine alerts, and book return confirmation

Brief Description of Application:

The Library Management System is a software application used to manage library activities such as book issue, book return, book search, user login, and notifications. The Notification Module is responsible for informing users about important updates related to their library activities

Modules Under Test

List the modules you will test:

1. Notification generation
2. Notification delivery
3. Notification display to the user

Test Scope

In Scope

1. Book issue notification
2. Due date reminder notification

Teacher's Signature

Out of Scope

3. Email or SMS server configuration
4. Third-party notification services

Test Types

Functional Testing

Functional testing verifies whether notifications are generated correctly with the right message, for the correct user, and at the correct time.

Smoke Testing

- Smoke testing verifies basic functionality such as loading of the notification panel after login and successful triggering of notifications

Regression Testing

- Regression testing ensures that existing functionalities like book issue and return continue to work properly after modifications in the Notification Module

Test Levels

System Testing

End-to-end scenario to be tested:

where a book is issued and the system automatically sends a notification to the user

Acceptance Testing

Who will perform acceptance testing and why?

- performed by the librarian and end users to verify that notifications are accurate, useful, and meet user requirements

Test Techniques

Equivalence Partitioning

Input Condition: Notification trigger event

Valid Inputs	Invalid Inputs
Book issued successfully	Book not issued
Due date reached	Invalid user ID**Boundary Value Analysis**

PRACTICAL JOURNAL

Class: TYIT **Sem: VI** **Roll No.: TYIT58** **Date: 08-01-26**

Course Name: Software quality assurance **Page no:**

Practical Number :- 03

Boundary Condition: Search keyword length

Test Value Expected Result

Test Value	Expected result
1 day before due date	**Reminder notification sent**
On due date	**Reminder notification sent**
After due date	**Fine notification**

Entry Criteria

Conditions required before testing starts:

1. Application is installed and running
2. User login credentials are available

Exit Criteria

Conditions required to stop testing:

1. All notification-related test cases are executed
2. No critical defects remain in the system

Risks and Mitigation

Risk Identified Mitigation Strategy

Risk Identified	Mitigation Strategy
Notification not delivered	Verify and retest notification trigger logic
Notification sent to wrong user	Validate user identification and mapping

Test Deliverables

Notes for reference

Test Type	Definition	Explanation
Functional Testing	Testing whether the system works according to requirements	Check if notification is generated after book issue
Smoke Testing	Basic testing to check system stability	Verify notification panel loads
Regression Testing	Ensures existing features work after changes	Verify book issue still works after notification update
